The ETF List is for Financial Professional use only and may not be provided or distributed to any customers, potential customers, third parties, or otherwise to the public. Osaic does not intend for this list to be a research report as defined in FINRA Rule 2241 or SEC Regulation AC. It is intended for Financial Professional education and informational purposes only.

The ETF selection is a two-step process that includes both quantitative and qualitative analysis. The quantitative scoring system that is based on return and risk-based metrics, across multiple rolling time periods and evaluates return, risk, and trading metrics. After the quantitative review each ETF is given a score, which is the starting point of the qualitative analysis. The qualitative analysis is made up of a review of the sponsor, index provider, index methodology and performance.

1. Trailing Returns - are returns generated over a specific historical time period and the calculation is based on the change in price over this historical time period.
2. Expense Ratio - is determined by dividing operating expenses by the average dollar value of the assets under management.
3. Standard Deviation- is a statistical measure of the volatility of a portfolio return around its mean.
4. Sharpe Ratio - uses a portfolio's standard deviation and total return to determine reward per unit of risk.
5. Beta - is a measure of a degree of change in value one can expect in a portfolio given a change in the value in a portfolio index. A beta higher than one generally indicates the security volatility is higher than its benchmark and a beta less than one generally indicates the security volatility is lower than its benchmark.
6. Alpha - measures the difference between a portfolio's actual returns and its expected performance given its beta and actual returns of the benchmark index. Alpha is often seen as the measurement of the value added or subtracted by a portfolio's manager.
7. Fund Type - A "Yes" indicates that the fund is a strategic beta ETF which is an ETF that uses a rules-based system for selecting investments to be included in the fund portfolio and is considered a blend of active and passive management. A "No" indicates that the fund is not a strategic beta ETF.

Past performance is no guarantee of future results. Individual client performance results will vary. There are risks involved with all investments that could include tax penalties and risk/loss of principal. The returns are compared to an index which has limitations because an investment cannot be made directly in an index and indexes have volatility and other material characteristics that make them differ from the comparable funds. An investment index does not reflect the deduction of any fees or expenses nor does it represent actual trading or any material economic and market factors.
